

ThoraSeal® Chest Seal

DESIGNED BY
CMC MED SOLUTIONS

LATEX-FREE

STERILE

MADE IN USA

Rapid, Reliable, and Life-Saving. The ThoraSeal® Chest Seal is your go-to solution for treating open chest wounds, including sucking chest wounds caused by trauma. Designed for ease of application and secure adhesion, it ensures effective sealing in the most critical situations, providing immediate care for pneumothorax and preventing life-threatening complications.

Key Features

+ ADVANCED ADHESION TECHNOLOGY

Utilizes a strong, medical-grade adhesive that adheres securely to wet, sweaty, or hairy skin, ensuring a reliable seal even in challenging conditions.

+ ONE-WAY VENTED DESIGN

Equipped with a 4 one-way vented channels that allows air and blood to escape while preventing re-entry, reducing the risk of tension pneumothorax.

+ TRANSPARENT FILM WITH PERFORATED BACKING

Clear, see-through design enables easy wound monitoring without removal, minimizing disturbance to the injury site. The perforations allow the ThoraSeal® to be folded without disrupting the hydrogel.

+ INDIVIDUALLY PACKAGED

Each chest seal is packaged in a mylar, laminated, vacuum-sealed pouch to ensure the highest standard of patient safety and hygiene and long term protection of the device.

+ EASY-TO-APPLY

The intuitive design allows for quick application by both professionals and lay responders, providing immediate care in emergency situations.

+ LARGE SURFACE AREA

Offers a large coverage area to accommodate various wound sizes, ensuring an effective seal on different chest injuries.

Specifications

- » Seal type: One-way vented chest seal
- » Packaging: Mylar, Laminated, Vacuum-sealed pouch
- » Size: 5"x5", packaged/folded 2.5"x2.5"
- » Material: Medical-grade, biocompatible adhesive and transparent backing

Benefits

IMMEDIATE INTERVENTION: Provides an effective seal for open chest wounds, helping to prevent life-threatening complications like pneumothorax.

SECURE AND RELIABLE: Stays firmly in place even in the presence of blood, sweat, or other bodily fluids, ensuring continuous protection and stability.

VERSATILE USE: Suitable for a wide range of environments, including emergency rooms, battlefields, and remote locations where quick intervention is crucial.

MINIMIZED RISK OF TENSION

PNEUMOTHORAX: The one-way vented design ensures that trapped air and fluids can escape, reducing the risk of developing a tension pneumothorax.

COST-EFFECTIVE: An affordable and essential tool for any trauma kit, ensuring preparedness without compromising on quality or reliability.

Use Cases

EMERGENCY MEDICAL SERVICES: Essential for paramedics and first responders dealing with trauma patients in the field.

MILITARY AND TACTICAL OPERATIONS: Ideal for use in combat and tactical environments where immediate care for penetrating chest injuries is critical.

HOSPITAL AND TRAUMA CENTERS: An important tool for emergency departments and trauma centers managing chest injuries.
